

## ENVIRONMENTAL POLICY

Our facility has been an environmentally sensitive facility since its establishment. In order to maintain this sensitivity, we undertake to comply with the environmental legal obligations, legislation and administrative regulations in force.

In order to protect the environment and ensure the necessity of sustainable tourism, we identify our impacts on the environment, keep our negative impacts, potential hazards and wastes under control, and dispose and/or have our non-recyclable wastes disposed of in a way that does not harm the environment.

In addition, to help prevent environmental pollution and always make improvements in this regard

We strive to minimise the use of natural resources, energy consumption, air, water and soil pollution.

We take all necessary measures to increase local employment, protect and enrich the natural life in the places where we are located, and we share all the activities we carry out

to protect our environment with the public.

In order to ensure that our environmental awareness and sustainability efforts are adopted not only by our personnel but also by our guests, suppliers, subcontractors and competent authorities, we contribute to the production of environmental protection projects in cooperation with local administrations.

Raising awareness and protecting our immediate environment, the people we work with

It is of great importance for us to ensure that companies approach with the same sensitivity.

In cooperation with local administrations, supplier companies and non-governmental organisations, to raise awareness of the people in the region about tourism. Our activities include ensuring the sustainability of tourism in the region by presenting local cultures to the guests and directing them to historical and cultural activities in the region.
