

## **ENERGY POLICY**

We are committed to taking the necessary measures to improve energy efficiency throughout the facility. For this purpose, we will use technologies that will continuously monitor and analyse our energy consumption.

We will save energy by optimising our heating, cooling, ventilation and lighting systems.

We will promote energy saving culture by encouraging our personnel to be energy conscious and providing trainings.

We aim to use renewable energy sources to meet the energy needs of our facility.

We will pay attention to ensure that the equipment used in our facility has high energy efficiency. We will prefer energy-efficient white goods, lighting fixtures and air conditioning systems.

We will maintain energy efficiency and optimise their performance through regular maintenance of the equipment.

We will consider energy efficiency standards in our new investments and create infrastructures that will minimise environmental impacts.

We will work towards zero waste target in waste management. We will prioritise waste reduction, recycling and recovery activities.

We will encourage the use of recyclable materials and minimise the amount of waste.

We will continuously review our waste management processes and minimise our environmental impact by making improvements.

We will inform our guests about energy saving and environmental protection. We will share simple practices for energy saving and raise awareness.

We will provide our guests with information about renewable energy use and environmentally friendly practices and encourage them to support them.
