

## **ENVIRONMENTAL POLICY**

Since its establishment, our facility has been environment friendly.

We comply with all environmental legislation and administrative regulations in force so that we can maintain this awareness.

We keep the environmental impacts of our wastes under control, dispose and/or have our non-recyclable wastes disposed of in a way that will not harm the environment, and improve our environmental performance by constantly monitoring the environmental impacts arising from our activities.

Additionally, helping in preventing environmental contamination and striving for improvements in this regard and conducting efforts that will minimise the use of natural resources are also included in our actions.

We cooperate with local administrations and provide contribution to the production of environmental preservation projects with the purpose of ensuring that environmental awareness is adopted not only by our employees but also by our guests and competent authorities. Awareness and protection of our immediate environment and ensuring that the organisations we collaborate with have the same awareness are of utmost significance in our business.

Ensuring the sustainability of tourism in the region by co-operating with local administrations, raising the awareness of the local people about tourism, presenting local cultures to the guests and directing them to historical and cultural activities in the region are among our activities.
